

# Simranjeet Singh

## Senior Software Engineer

smrnjeet.dev@gmail.com | Delhi, India (open to relocate) | +91 7982245402  
<https://jeet22.xyz> | [github.com/smrnjeet222](https://github.com/smrnjeet222) | [linkedin.com/in/smrnjeet222](https://www.linkedin.com/in/smrnjeet222)

## Professional Summary

Senior Software Engineer with 5+ years building full-stack and distributed systems across React, Node.js, Go, and TypeScript. Experienced in designing event-driven architectures, idempotent workflows, and reliability-focused backend systems for transaction-heavy products. Proven track record leading cross-team delivery, mentoring engineers, and shipping production systems at scale: spanning identity, marketplace, onboarding, rewards, and DeFi protocols. Active in AI/LLM integration, including RAG pipelines, agentic workflows, and vector search.

## Professional Experience

### Senior Software Engineer – (Fullstack, Solidity, Backend Systems)

Dec 2023 — Present  
Remote, Singapore

Mon Protocol

- **Token infrastructure platform:** scaled systems supporting **\$30M+ deposits** and thousands of concurrent users.
- Reduced API latency by **60%** on high-read endpoints (staking/rewards) via cache-first Redis and query optimization.
- Unified data layers across **smart contracts, indexers, and APIs:** eliminated state mismatches.
- Productized staking/launchpool into **repeatable DeFi playbook:** safe rollouts, no one-offs.
- Built **MonID** with **account abstraction** (ERC-4337): single wallet UX across games, slashed auth fragmentation.
- Architected **Collect Shiny NFT marketplace:** physical card custody, Seaport protocol, portfolio APIs.
- Automated inventory with **LLM-powered OCR pipelines** (Telegram, MCP): cut catalog time by 80%.
- Shipped **Morpho-integrated lending** with real-time APY/risk data: treated as distributed systems problem.
- Designed **RWA vault** (Lexium): async deposits, share accounting, delayed settlement handling.
- Built **Proof of Activity** with **gas sponsorship** (Pimlico) and smart wallets: seamless Web2 onboarding.
- Enabled **cross-chain Layer 2** expansion with LayerZero/OFT, safe chain onboarding patterns.
- Implemented **RAG + vector search** for card identification: image retrieval, pricing context via MCP
- *Tech: NestJS, Ponder, OpenTelemetry, Morpho, ERC-4337, Ethereum, Seaport, Telegram API, MCP, LLM OCR*

### Senior Software Engineer – (Tech Lead, React Native, Solidity)

Jan 2023 — Dec 2023  
Remote, Dubai

Pop Social

- **AI-powered social media platform:** led **4-engineer React Native team** shipping to **50K+ MAU**, raised quality without slowing delivery.
- Drove **20% user growth** via onboarding/engagement flows: made Web3 accessible to mainstream users.
- Boosted session time **35%** (measured via analytics) via state/query optimization and render fixes.
- Shipped **NFT marketplace** with **Ethereum smart contract** integration and subgraph-backed mobile APIs.
- Migrated to in-house **Phinx** wallet layer: **account abstraction** (ERC-4337), reusable auth across products.
- Added **ENS-style identity** for on-chain naming and profile experiences.
- *Tech: React Native, Expo, Ethereum, Subgraphs, ERC-4337, Web3Auth, TanStack Query, Zustand*

### Fullstack Developer – (React.js, Rust, Solana, DeFi)

Jul 2021 — Jun 2022  
Remote

Cykura

- **Open-source DEX protocol on Solana:** shipped the **first concentrated-liquidity AMM** on Solana, swaps, LP deposits, position management from scratch.
- Adapted **Uniswap V3 patterns** for Solana: concentrated liquidity math, tick-based position tracking, fee-tier logic.
- Built **V2 protocol with Anchor:** rebuilt concentrated-liquidity AMM from Serum-based V1 to modern architecture.
- Built **transaction-state UX + analytics** for high-frequency traders: clarified pending vs confirmed.
- Implemented **Rust-informed** Solana program debugging: traced contract-level execution for frontend integration.
- Architected separation of ingestion/read models/UI state: cut debug time as complexity scaled.
- Hid Solana network quirks behind **async transaction handling:** reliable wallet flows.
- *Tech: React, TypeScript, Solana, Anchor, Rust, Uniswap V3 patterns, Firebase, Hasura, Cloud Functions*

- **Digital collectibles & fantasy gaming platform:** scaled **TopRun fantasy game** APIs supporting **10K+ DAU**.
- Built **marketplace** + **admin** APIs: orders, listings, auctions, sub-200ms response times.
- Cut MTTR (mean time to recovery) **50%** via observability-first logging and health checks.
- Unified **Ethereum smart contract** events via subgraph indexing: eliminated raw chain reads.
- Migrated from MongoDB to **PostgreSQL** + **Sequelize**: stronger relational model, query performance.
- *Tech: Node.js, PostgreSQL, Sequelize, MongoDB, Subgraphs, NFT marketplace, Ethereum*

## Skills

---

**Languages:** TypeScript, Go, Solidity, Rust (familiar), SQL

**Backend:** Node.js, NestJS, PostgreSQL, Redis, Kafka, gRPC, GraphQL, OpenTelemetry, microservices

**Frontend:** React, Next.js, React Native, TanStack Query, Zustand, Tailwind CSS

**Web3:** EVM, Solana, Layer 2, Account Abstraction, DeFi protocols, NFT marketplaces, Subgraphs, Hardhat/Foundry

**AI / LLM:** RAG, Agentic workflows, MCP, OpenAI/Anthropic APIs, vector DBs, embedding models, prompt engineering

**Cloud / Infra:** AWS (Lambda, ECS, RDS), Docker, CI/CD, monitoring, observability

## Projects & Open Source

---

**oxbin** (Go, Sui)

[github.com/smrnjeet222/oxbin](https://github.com/smrnjeet222/oxbin)

- Built at **ETHGlobal New Delhi 2025**: a terminal-first decentralized pastebin/file-sharing workflow.
- Implemented on-chain content anchoring with developer-friendly CLI ergonomics and lightweight sharing semantics.

**Safu Pass** (React.js, Solidity, Subgraph)

[devfolio.co/projects/safu-passs-fa82](https://devfolio.co/projects/safu-passs-fa82)

- Built at **ETHIndia 2023**: fullstack password manager with React frontend, Solidity contract logic, and subgraph-backed indexed reads.
- Modeled user access and verification behavior with contract events surfaced through API-friendly indexed data.

**Grid1** (React.js, Solidity, Subgraph)

[devfolio.co/projects/grid-47d5](https://devfolio.co/projects/grid-47d5)

- Built at **ETHIndia 2022** and won The Graph prize for a subgraph-powered implementation.
- Developed a forkable NFT collection builder dApp with end-to-end integration across contracts & indexed queries.

**QuickSwap / interface-v2**

[github.com/QuickSwap/interface-v2](https://github.com/QuickSwap/interface-v2)

- Improved swap-screen responsiveness by tightening query dependencies, cache/state sync, and hook-based UI code-paths to reduce unnecessary re-renders.

**project-serum / swap-ui**

[github.com/project-serum/swap-ui](https://github.com/project-serum/swap-ui)

- Built two-way swap interactions, improved price, owned-token, and wallet-balance visibility for clearer executions.

## Education

---

**B.Tech, Computer Science (CSE)**

2018 – 2022

Guru Gobind Singh Indraprastha University (IPU), Delhi
